Hi Dr. Beezer,

I have had many conversations with Tom Judson about the UTMOST grant application.

This sounds like a wonderful research to investigate more thoroughly. I would be delighted to contribute as a test site through using your open-source linear algebra textbook augmented with Sage. How I plan to teach the course, and have in the past, seems to be applicable for a high data test site.

I appreciate the care and effort you have put into developing Sage and commitment to its broad availability.

Best,

Matthew
